Education

J.C. Bose University of Science and Technology, YMCA **Aug 2023 – May 2027**
Bachelor of Technology (B.Tech) in Computer Science Haryana, India

Experience

Kinetrexa Software Private Limited **Jul 2026 – Aug 2026**
Frontend Development Intern | React, Vite, JavaScript, CSS3 Remote

- Built two production-ready React applications using Vite, focusing on responsive design and reusable component architecture.
- Developed a Kanban-style task management system with drag-and-drop functionality and role-based team permissions.
- Implemented client-side routing and custom React hooks to streamline state management across application views.

Projects

CareTrack - Healthcare Management Platform | React.js, Node.js, Express.js, Tailwind CSS, JWT **Code**

- Developed full-stack healthcare tracker with secure authentication, medication tracking, appointment scheduling, and automated email/push notifications using React 19, Express 4, and LowDB.
- Built 20+ RESTful API endpoints with JWT middleware, user-scoped data access, and automated background jobs using node-cron for 15-minute medication reminders and daily appointment alerts.
- Designed responsive UI with Tailwind CSS 4.x, React Router 7.x navigation, Zustand state management, and Framer Motion animations across 10+ protected routes with dark mode support.
- Integrated Nodemailer SMTP service and Web Push API (VAPID) with Service Worker implementation, achieving multi-channel notification delivery with granular user preference controls.

Obys Agency Clone - Interactive Animation Showcase | HTML5, CSS3, JavaScript, GSAP, Locomotive Scroll **Code**

- Built pixel-perfect single-page website clone featuring advanced animations, smooth scrolling, and interactive UI elements using GSAP, Locomotive Scroll, and Shery.js for sophisticated visual effects.
- Implemented loader sequences, scroll-triggered animations, magnetic cursor effects, dynamic video interactions, and hover-based image distortions across 5+ fully responsive sections.
- Integrated hardware-accelerated Locomotive Scroll with GSAP ScrollTrigger synchronization, custom typography, and modular JavaScript architecture optimized for 60fps performance.

Refokus Clone – Agency Landing Page | React.js, Vite, Tailwind CSS, Framer Motion, Locomotive Scroll **Code**

- Built a pixel-perfect clone of the Refokus agency website with advanced scroll-based animations using Framer Motion and Locomotive Scroll, featuring 10+ modular React components.
- Implemented interactive UI elements including animated hero section, infinite marquees, hover-responsive product cards, and smooth page transitions with 60fps performance.
- Deployed on Vercel with optimized build pipeline using Vite, achieving fast page loads through code splitting, lazy loading, and hardware-accelerated transforms across all devices.

Technical Skills

Languages: HTML5, CSS3, JavaScript, Typescript
Frontend Technologies: React.js, Tailwind CSS, Redux Toolkit, React Router, Context API
Animation Libraries: GSAP, Framer Motion, Locomotive Scroll, Three.js
API & Data Handling: Fetch API, Axios, JSON
Design & Prototyping: Figma
Version Control & Tools: Git, GitHub, Heroku, Netlify, Vercel, VS Code

Achievements & Certifications

- Built and deployed a personal portfolio and multiple frontend projects demonstrating proficiency in React.js and Tailwind CSS.
- Maintained an active GitHub profile with consistent contributions and multiple public repositories with live deployments.
- Strong foundation in data analysis with Python, performing EDA and visualization on real-world datasets using Pandas and Matplotlib.
- Committed to continuous learning – actively exploring new frontend frameworks, design patterns, and best practices.
